SPECIALIST WEAVERS TO  
THE BISCUIT INDUSTRY

---

**C**otton webbing has been very widely used in the production of biscuits throughout the World for several generations. Although many attempts have been made to develop other types of conveyor belting for the specialised application the traditional cotton webbing remains the firm favourite of biscuit manufacturers everywhere. The release properties and absorption characteristics of woven cotton cannot be matched by more modern materials.

**T**he availability of the unique skills required to produce a finely woven, two ply, cotton webbing has diminished in recent years as the heavy weaving industry has contracted. At Marathon, we have reversed this trend by investing in an expansion programme which has increased our manufacturing capacity to eighteen heavy looms working solely on biscuit webbing. We believe that we are the only remaining volume producer of the traditional densely woven styles which have always enjoyed an excellent reputation in the industry. Our lightweight and heavyweight biscuit webbings are still produced to the original specification which have proved so successful over the years.

**W**e carry a large inventory of standard widths and many non standards are also available from stock. As a general guide to our ex-stock range we list below the widths (mm) which we endeavour to hold at all times.

Lightweight, 1.5mm thick – 300, 700, 800, 825, 838, 850, 900, 915, 1000, 1050, 1070, 1100, 1250, & 1300.

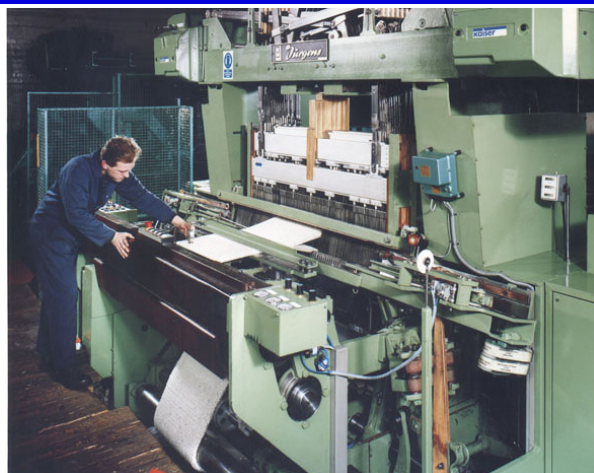

Heavyweight, 2.5mm thick – 200, 250, 300, 850, 900, 915, 1000, 1050, 1100, 1300, 1325, & 1350.

**W**e also carry in stock a limited range of lightweight polyester webbings which are recommended for high frequency ovens.

*Spliced and sewn endless belts can be offered in any of the widths indicated within a few days.*

---

**A**lthough our primary products are premium quality webbing we are always happy to quote against customer samples of inferior qualities which are sometimes preferred on less arduous applications when initial outlay has to take priority over performance and life expectancy. In addition to our biscuit webbing looms we operate a further diverse range of looms which enables us to weave any type of woven belt produced by our many competitors supplying lower specification webbings and unable to produce premium qualities. More than 80% of our production of heavy industrial textiles is exported to over 90 countries. This success has resulted in our gaining the Queen's Award for Export Achievement on two occasions.

BS EN ISO 9001 Certificate No. 1049

*Our registration to ISO9001:2000 ensures that the quality of our product is carefully controlled throughout all stages of manufacture and all inspection records are kept for a minimum of three years.*

**I**n these days of environmental concerns we are pleased to be able to say that our cotton webbings originate from a natural product and being biodegradable can be returned to the earth when their useful life is ended. This is becoming an increasingly important attribute as the controls on emissions and waste disposal are being tightened in an effort to correct the legacy of a deteriorating global environment. It is said that an environmental revolution will take place in industry over coming years and most companies will have to demonstrate a level of control of their total impact on the environment. Cotton webbings represent a tiny step in the right direction.
